Cyclone Power Technologies to Present All-Fuel Engine at National Algae Conference

Cyclone Power Technologies to Present
All-Fuel Engine at National Algae Conference

Pompano Beach, FL, Sept. 1, 2009. Cyclone Power Technologies (Pink Sheets: CYPW) will present its award winning, all-fuel external combustion engine technology at the National Algae Association Conference, to be held September 17-18 in Houston, TX.

The Cyclone Engine is a modern steam engine capable of running on virtually any fuel, including today's most promising biofuels made from algae. In tests performed by the company earlier this year, the Cyclone Engine's fuel atomizers and combustion chamber successfully burned several different varieties of fuel derived from algae without engine modification and, equally important, without expensive processing of the fuels.

"Algae is a wonderful fuel source," stated Harry Schoell, CEO of Cyclone. "It has a high BTU content relative to other biofuels, and burns cleanly and efficiently in our engine."

The economic and environmental promise is enormous for this high yielding, carbon neutral fuel, which can be grown almost anywhere without competing with worldwide food supplies. Recently, major corporations such as Chevron, BP and ExxonMobil have made major investments in algae fuel production.

The National Algae Association (NAA) is the leading trade organization for algae researchers, producers and financiers. The NAA's conference, entitled Algae: The New Oil, will feature presentations covering a full range of subjects focusing on the commercialization of algae. It will be held September 17-18 at the Sheraton North Houston.

CORPORATE PROFILE

Cyclone Power Technologies is the developer of the award-winning Cyclone Engine - an eco-friendly external combustion engine with the power and versatility to run everything from portable electric generators and garden equipment to cars, trucks and locomotives. Invented by company founder and CEO Harry Schoell, the patented Cyclone Engine is a modern day steam engine, ingeniously designed to achieve high thermal efficiencies through a compact heat-regenerative process, and to run on virtually any fuel - including bio-diesels, syngas or solar - while emitting fewer greenhouse gases and irritating pollutants into the air. Currently in its late stages of development, the Cyclone Engine was recognized by Popular Science Magazine as the Invention of

the Year for 2008, and was presented with the Society of Automotive Engineers' AEI Tech Award in 2006 and 2008. Additionally, Cyclone was recently named Environmental Business of the Year by the Broward County Environmental Protection Department. For more information, visit www.cyclonepower.com.
