**Cyclone Power Technologies Showcases Green Engine Solution to Truck-Stop Pollution**

POMPANO BEACH, FL., Nov. 6, 2007 -- Cyclone Power Technologies Inc. (Pink Sheets: CYPW) released today photos and updates from its recent showcase at the 2007 SAE Commercial Vehicle Engineering Congress and Exhibition in Chicago, IL.

Cyclone displayed publicly for the first time at this prestigious conference a 330 HP model of its Green Revolution Engine™, designed to exert approximately 2650 ft. lbs. of starting torque, installed in a full truck chassis with a Waste Heat Engine (WHE) power co-generation system.

As used in a commercial truck, the WHE is designed to power auxiliary functions of the vehicle such as air conditioning by using only waste heat released from the truck's exhaust or off its primary engine manifold. When the truck's engine is not running, the WHE can perform the same important functions by burning gas or diesel from the fuel tank, but it produces virtually no noxious emissions or pollutants.

"The WHE application was extremely well received by manufacturers who are finding it difficult to meet new U.S. commercial truck emissions standards," stated Wilson McQueen, VP Marketing for Cyclone. "We believe that our waste heat engine is the solution to the enormous problem of truck-stop pollution."

The SAE Commercial Vehicle Conference featured almost 200 exhibitors including Ford Motor Company, Caterpillar, Freightliner, International Truck and Engine Corp., Isuzu Motors, the U.S. Army and the U.S. Environmental Protection Agency.

Photos of the Cyclone engines displayed at the SAE conference can be found on the company's web site at [www.cyclonepower.com](http://www.cyclonepower.com).

**About Cyclone**

Cyclone holds the U.S. patent, international patent applications, and exclusive commercial rights to the Green Revolution Engine(tm), an environmentally-friendly and highly-efficient external combustion, heat-regenerative engine. Developed Cyclone's President and CEO, Harry Schoell, the Green Revolution Engine regenerates (or recycles) its heat, which allows it to run cleaner, cooler and more efficiently than traditional internal combustion engines. It is capable of running on any liquid or gaseous fuel, including ethanol and propane, and is lubricated with de-ionized water instead of motor oil. By eliminating many subsystems like oil pumps, radiators, catalytic converters and fuel injectors, Cyclone's Green Revolution Engine is expected to cost less to manufacture, operate and maintain; however, it is highly scalable and sufficiently powerful for applications ranging from lawn equipment and small home generators, large stand alone generators, to cars, trucks, buses, RV's, boats and ships, as well as earth moving equipment and locomotives.

**Safe Harbor Statement**

This release contains certain "forward-looking" statements, as well as historical information, involving risks and uncertainties, which are covered by the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Although we believe that the expectations reflected in these forward-looking statements are reasonable, we can give no assurance that the expectations reflected in these forward-looking statements will prove to be correct. Forward-looking statements include those that use forward-looking terminology, such as the words "anticipate," "believe," "estimate," "expect," "intend," "may," "project," "plan," "will," "shall," "should," and similar expressions, including when used in the negative. Although we believe that the expectations reflected in these forward-looking statements are reasonable and achievable, these statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements. Such statements are based on management's current expectations and are subject to certain factors, risks and uncertainties that may cause actual results, events and performance to differ materially from those referred to or implied by such statements. Additionally, the company's actual or future results may differ materially from those anticipated depending on a variety of factors, including continued acquisition and maintenance of favorable license arrangements, success of market research identifying new product opportunities, successful introduction of new products and continued product innovation, sales and earnings growth, and general economic conditions. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. All forward-looking statements attributable to us are expressly qualified in their entirety by these and other factors. Cyclone Power Technologies does not intend to update any of the forward-looking statements after the date of this release to conform these statements to actual results, reflect events or circumstances or to changes in its expectations, except as may be required by law.
