Cyclone Power Technologies wishes Happy Thanksgiving

Dear friends of Cyclone,

Happy Thanksgiving to you and your families.

As you enjoy your holiday feast, here's a little interesting morsel of news. Cyclone has been featured in ***Esquire Magazine***... and not for Harry Schoell's keen fashion sense.

Cyclone's biomass powered steam engine that powers the EATR, a DARPA-sponsored project conducted with Robotic Technology, was named by the popular magazine as one their "Science Innovations of 2010" and included in the section titled "The Brightest: 15 Geniuses Who Give Us Hope."

Writes the author: "EATR is the first grazing robot. Using a hybrid external-combustion engine designed by Cyclone Power Technologies Inc., EATR converts collected biomass - sticks, leaves, and other vegetation - into mechanical energy through what is basically a modified steam engine.... The potential military uses are numerous, including long-range reconnaissance, surveillance, and troop support in the form of portable energy."

To read more, pick up a December issue of ***Esquire*** on the newsstands, or click here: <http://www.esquire.com/features/brightest-2010/new-inventions-1210#ixzz168Zjl9Gc>

Best wishes for a safe and healthy holiday,

The Cyclone Team
