Cyclone Power Technologies and Phoenix Power Group Generate Clean Power from Used Motor Oil

Pompano Beach, FL, Feb 2, 2011. [Cyclone Power Technologies](#) (Pink Sheets: CYPW) and its licensee [Phoenix Power Group](#) have successfully powered-up the *Phoenix 10*, producing grid-tied electricity from the clean combustion of used motor oil. The event demonstrated the successful functionality of the first ever small-scale **waste oil power generator**, and marks the commencement of full system performance and durability testing.

The *Phoenix 10* is a unique **renewable power** system designed specifically for the small business owner. Once in production, slated to commence later this year, the *Phoenix 10* will allow thousands of automotive service centers to recycle their used motor oil in an **environmentally-friendly** and **profitable** manner. The system is powered by Cyclone's *WHE-25* engine with a clean-burning combustion chamber designed for the rigors of used motor oil. Coupled with a grid-tied generator, the system produces up to 10kW of power that can off-set a facility's peak electricity consumption.

"We are thrilled with the initial full-system tests of the *Phoenix 10*, and truly believe we witnessed a historic event," stated Thomas V. Thillen, President of Phoenix. "This is new breed of **renewable power generator** - one that will provide garages and lube centers throughout the world an immediate **revenue producing** opportunity from the disposal of their waste materials."

According to the **U.S. Environmental Protection Agency**, waste oil from one oil change can contaminate 1 million gallons of fresh water. The *Phoenix 10* presents a true **economic incentive** for users of motor oil to dispose of their waste in an environmentally friendly manner instead of one which can cause great harm to our water supply. In tests conducted by an independent third party, the *Phoenix 10* running on used motor oil generated 30% less SO₂ and almost **50% less NO_x** than a comparable generator running on diesel fuel.

Corporate Profile

Cyclone Power Technologies is the developer of the award-winning [Cyclone Engine](#) - an **eco-friendly** external combustion engine with the power and versatility to run everything from portable electric generators and garden equipment to cars, trucks and locomotives. Invented by company founder and [CEO Harry Schoell](#), the patented Cyclone Engine is a modern day **steam engine**, ingeniously designed to achieve high thermal efficiencies through a compact heat-regenerative process, and to run on virtually any fuel - including **bio-diesels**, **syngas** or **solar** - while emitting fewer greenhouse gases and irritating pollutants into the air. Currently in its late stages of development, the Cyclone Engine was recognized by *Popular Science Magazine* as the **Invention of the Year** for 2008, and was presented with the Society of Automotive Engineers' **AEI Tech Award** in 2006 and 2008. Additionally, Cyclone was recently named **Environmental Business of the Year** by the Broward County Environmental Protection Department. For more information, visit www.cyclonepower.com.
