

**Cyclone Power Technologies' Green Engine  
Named *Popular Science* Invention of the Year**

POMPANO BEACH, FL., May 22, 2008. Cyclone Power Technologies Inc. (Pink Sheets: CYPW) announced today that *Popular Science* magazine named the clean, green Cyclone Engine as a 2008 Invention of the Year.

The Cyclone Engine was one of ten product inventions to be honored in *Popular Science's* second annual Invention Awards. The announcement was made in the magazine's June 2008 edition. The accompanying article, "Steam Under The Hood," can be read on the company's web site at <http://www.cyclonepower.com>.

The widely-read publication highlighted many of the benefits of the Cyclone Engine, including its positive environmental impact and cost efficiency as compared to internal combustion engines. Unlike today's gas or diesel burning engines, the Cyclone Engine can run on any fuel including pure biodiesel or ethanol, and emits far less pollutants, irritating particles and greenhouse gases into the air. Also, because of its unique heat regenerative design, the Cyclone Engine is able to achieve higher thermal efficiency which leads to less fuel consumption and lower costs of operation. Cyclone has packaged all this in a compact, lightweight and powerful engine.

"This a great honor for us," stated the engine's inventor and company CEO, Harry Schoell. "We know that *Popular Science* sees hundreds of new inventions every year, but I guess they recognized something truly special in ours."

Mr. Schoell added, "Consumers and businesses badly need an alternative to the internal combustion engine – for our environment, for our economy and for our national security. We believe that the Cyclone Engine is the right solution."

**CORPORATE PROFILE**

Cyclone holds the U.S. patent, international patent applications, and exclusive commercial rights to the Cyclone Engine, an environmentally-friendly and highly-efficient external combustion, heat-regenerative engine. Developed by the company's President and CEO, Harry Schoell, the Cyclone Engine regenerates (or recycles) its heat, which allows it to run cleaner, cooler and more efficiently than traditional internal combustion engines. The Cyclone Engine is capable of running on any liquid or gaseous fuel, including ethanol, bio-diesel and propane, and is lubricated with de-ionized water instead of motor oil. By eliminating many subsystems like oil pumps, radiators, catalytic converters and fuel injectors, Cyclone Engines are expected to cost less to manufacture, operate and maintain; however Cyclone Engines are highly scalable and sufficiently powerful for applications ranging from lawn equipment and small home generators to cars, trucks, buses ships and locomotives. The Broward County Environmental Protection Department recently named Cyclone Power Technologies as the "**Environmental Business of the Year.**"

**Safe Harbor Statement**

This release contains certain "forward-looking" statements, as well as historical information, involving risks and uncertainties, which are covered by the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Although we believe that the expectations reflected in these forward-looking statements are reasonable, we can give no assurance that the expectations reflected in these forward-looking statements will prove to be correct. Forward-looking statements include those that use forward-looking terminology, such as the words "anticipate,"

"believe," "estimate," "expect," "intend," "may," "project," "plan," "will," "shall," "should," and similar expressions, including when used in the negative. Although we believe that the expectations reflected in these forward-looking statements are reasonable and achievable, these statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements. Such statements are based on management's current expectations and are subject to certain factors, risks and uncertainties that may cause actual results, events and performance to differ materially from those referred to or implied by such statements. Additionally, the company's actual or future results may differ materially from those anticipated depending on a variety of factors, including continued acquisition and maintenance of favorable license arrangements, success of market research identifying new product opportunities, successful introduction of new products and continued product innovation, sales and earnings growth, and general economic conditions. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. All forward-looking statements attributable to us are expressly qualified in their entirety by these and other factors. Cyclone Power Technologies does not intend to update any of the forward-looking statements after the date of this release to conform these statements to actual results, reflect events or circumstances or to changes in its expectations, except as may be required by law.
