Cyclone Power Technologies Press Release

Cyclone Power Commences
Durability Testing of Waste Heat Engine

Pompano Beach, FL, July 22, 2009. Cyclone Power Technologies (Pink Sheets: CYPW) announced today that it has commenced durability testing of its award winning Waste Heat Engine (WHE), the final stage prior to on-site beta installation.

Over the next month, Cyclone will run its WHE for a minimum of several hundred hours under the load of an electric alternator. The company then plans to break-down the engine to study the effects of long term operation on parts and components prior to installation at its initial beta site.

"We believe we can debug any remaining mechanical issues in this test period and prepare our engine system for commercial operation," stated Allan Brown, Cyclone's senior engineer on the WHE project. "While there's more work to be done, we've made great progress in a short period of time."

The WHE is a self-starting steam engine capable of producing up to 18HP (10kW of electricity) from low to medium-temperature waste heat sources such as industrial furnaces, commercial ovens and even solar thermal collectors.

The WHE is also the power source for the Energetically Autonomous Tactical Robot (EATR™), a Phase II SBIR project sponsored by the Defense Advanced Research Projects Agency (DARPA), Defense Sciences Office. The EATR was recently covered on Fox News, CNET News, Popular Science and Wired.

CORPORATE PROFILE

Cyclone Power Technologies is the developer of the award-winning Cyclone Engine - an eco-friendly external combustion engine with the power and versatility to run everything from portable electric generators and garden equipment to cars, trucks and locomotives. Invented by company founder and CEO Harry Schoell, the patented Cyclone Engine is a modern day steam engine, ingeniously designed to achieve high thermal efficiencies through a compact heat-regenerative process, and to run on virtually any fuel - including bio-diesels, syngas or solar - while emitting fewer greenhouse gases and irritating pollutants into the air. Currently in its late stages of development, the Cyclone Engine was recognized by Popular Science Magazine as the Invention of the Year for 2008, and was presented with the Society of Automotive Engineers' AEI Tech Award in 2006 and 2008. Additionally, Cyclone was recently named Environmental Business of the Year by the Broward County Environmental Protection Department. For more information, visit www.cyclonepower.com.
