## Cyclone Power Technologies Receives Sixth U.S. Patent for its Green Engine

**Pompano Beach, FL**, August 24, 2010. [Cyclone Power Technologies](#) (Pink Sheets: CYPW) announced today that the **U.S. Patent and Trademark Office** has issued a Notice of Patent Allowance on the pre-heater coil of the Company's heat-regenerative **external combustion engine**.

The patented pre-heater coil serves two important functions for the Cyclone Engine. First, it absorbs heat from expanding steam at the instant it escapes from the engine's cylinders to pre-heat the working fluid, de-ionized water, before entering the combustion chamber. This process increases net cycle **thermal efficiencies** and decreases the amount of fuel required to operate the engine. Secondly, the process acts as a pre-condenser, turning steam back into water before even entering the condensing unit, allowing the system to cool itself more efficiently.

"The pre-heater coil is a key component that really separates our **heat-regenerative** external combustion engine from **steam technology** of the past, and for this reason, it's really an important patent to have issued," stated Harry Schoell, Cyclone's CEO and inventor of the engine.

The current patent on the Cyclone Engine is its sixth in the United States. The Company now has patents on each of the major component systems of the engine - one on its combustion chamber, two on its mechanical operations (comprised of pistons, valves, bearings and other sub-components), one on the condensing system, and now one on the unique **heat-recuperation** processes of the system. The Company also has an overall patent on the total Cyclone Engine system in the United States and several other nations throughout the world.

### Corporate Profile

Cyclone Power Technologies is the developer of the award-winning [Cyclone Engine](#) - an eco-friendly external combustion engine with the power and versatility to run everything from portable electric generators and garden equipment to cars, trucks and locomotives. Invented by company founder and [CEO Harry Schoell](#), the patented Cyclone Engine is a modern day steam engine, ingeniously designed to achieve high thermal efficiencies through a compact heatregenerative process, and to run on virtually any fuel - including bio-diesels, syngas or solar - while emitting fewer greenhouse gases and irritating pollutants into the air. Currently in its late stages of development, the Cyclone Engine was recognized by Popular Science Magazine as the Invention of the Year for 2008, and was presented with the Society of Automotive Engineers' AEI Tech Award

in 2006 and 2008. Additionally, Cyclone was recently named Environmental Business of the Year by the Broward County Environmental Protection Department. For more information, visit [www.cyclonepower.com](http://www.cyclonepower.com).
